Components Map

Actor swimlanes across the pipeline stages, with the post-match learning loop feeding back into Supabase memory.

Case 8 · Aryan / Match Day Optimizer — Components Map

Actor	Trigger	Input	Context	Processing	AI	Output
Aryan (User)	Picks an upcoming match in the app					
Cricket Data API (Live data)		Fetches squads, playing XI, recent player stats				
Gemini API (Context · Search grounding)			Pulls pitch report, weather, venue history, team / injury news			
Supabase (Memory)			Supplies active scoring weights + past error patterns			
Scoring Engine (Code)				Scores each player Optimizer picks best 11 Validator checks rules		
Gemini API (Reasoning)					Writes match-specific reasons · Picks C & VC with justification	
Review Gate (Aryan)						Reviews team, swaps if needed → Copies into Dream11

POST-MATCH LEARNING LOOP

Actor	Trigger	Input	Context	Processing	AI	Output
Aryan (User)	Match ends	Enters actual Dream11 points per player				
Supabase (Memory)			Stores predicted vs actual per player	Calculates error by format, venue, role, position		
Gemini API (Analyst)					Explains patterns Suggests weight changes	
Review Gate (Aryan)						Approves new weights → Next match uses them

Trigger / Input · External context · Processing · AI generation · Review / Output · self-improvement loop
